

# Leachate Removal From the Jefferson Parish

## Sanitary Landfill

August 1, 2018 through February 28, 2019

As required by the Parish's Pretreatment Program discharge permit, the landfill is required to report monthly leachate volumes sent to the Bridge City Wastewater Treatment Plant. The graph below shows these volumes in gallons per hour. As pumps reach regulatory compliance, they will begin to cycle on and off depending on the rate leachate reaches the sumps. In addition, flows are also influenced by rainfall at the site. All pumps in Phases 3A, 3B, and 4A are operational and cycling per regulatory requirements. Only 6 pumps in Pre-subtitle D Phases 1 and 2 (regulations did not require leachate pumps) remain to be replaced. 92% of leachate pumps are in service (72 of 78).
