

## MATTER AND ITS INTERACTIONS

<b>Performance Expectation</b>	Develop a model to describe that matter is made of particles too small to be seen.
<b>Clarification Statement</b>	Examples of evidence could include adding air to expand a basketball, compressing air in a syringe, dissolving sugar in water, or evaporating salt water. Does not include atomic scale mechanism of evaporation and condensation or defining the unseen particles.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li><b>Developing and using models:</b> Modeling in 3–5 builds on K–2 experiences and progresses to building and revising simple models and using models to represent events and design solutions. <ul style="list-style-type: none"> <li>Develop and/or use models to describe and/or predict phenomena.</li> </ul> </li> <li>Planning and carrying out Investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>STRUCTURE AND PROPERTIES OF MATTER</b></p> <p>Matter of any type can be subdivided into particles that are too small to see, but even then the matter still exists and can be detected by other means. A model showing that gases are made from matter particles that are too small to see and are moving freely around in space can explain many observations, including boiling water, the inflation and shape of a balloon, and the effects of air on larger particles or objects. (UE.PS1A.a)</p>	<p><b>SCALE, PROPORTION, AND QUANTITY</b></p> <p>Natural objects and/or observable phenomena exist from the very small to the immensely large or from very short to very long time periods.</p>

## MATTER AND ITS INTERACTIONS

<b>Performance Expectation</b>	Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total amount of matter is conserved.
<b>Clarification Statement</b>	Examples of chemical changes includes reactions that produce new substances with new properties. Examples of physical changes could include phase changes, dissolving, or mixing.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li>Developing and using models</li> <li>Planning and carrying out Investigations</li> <li>Analyzing and interpreting data</li> <li><b>Using mathematics and computational thinking:</b> Mathematical and computational thinking in 3-5 builds on K-2 experiences and progresses to extending quantitative measurements to a variety of physical properties and using computation and mathematics to analyze data and compare alternative design solutions. <ul style="list-style-type: none"> <li>Describe, measure, estimate, and/or graph quantities (e.g., area, volume, time) to address scientific and engineering questions and problems.</li> </ul> </li> <li>Constructing explanations and designing solutions</li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>STRUCTURE AND PROPERTIES OF MATTER</b> The amount of mass in matter is conserved when it changes form, even in transitions in which it seems to vanish. (UE.PS1A.b)</p> <p><b>CHEMICAL REACTIONS</b> When two or more different substances are mixed, a new substance with different properties may be formed. (UE.PS1B.a)</p> <p>No matter what reaction or change in properties occurs, the total mass of the substances does not change. (UE.PS1B.b)</p>	<p><b>ENERGY AND MATTER</b> Matter flows and cycles can be tracked in terms of mass of the substances before and after a process occurs. The total mass of the substances does not change. This is what is meant by conservation of matter. Matter is transported into, out of, and within systems.</p>

## MATTER AND ITS INTERACTIONS

<b>Performance Expectation</b>	Make observations and measurements to identify materials based on their properties.
<b>Clarification Statement</b>	Examples of materials to be identified could include baking soda and other powders, metals, minerals, or liquids. Examples of properties could include color, hardness, reflectivity, electrical conductivity, thermal conductivity, response to magnetic forces, or solubility; density is not intended to be used as an identifiable property. No attempt is made to define the unseen particles or explain the atomic-scale mechanism of evaporation and condensation.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li>Developing and using models</li> <li><b>3. Planning and carrying out Investigations:</b> Planning and carrying out investigations to answer questions (science) or test solutions (engineering) to problems in 3–5 builds on K–2 experiences and progresses to include investigations that control variables and provide evidence to support explanations or design solutions. <ul style="list-style-type: none"> <li>Make observations and/or measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon or test a design solution.</li> </ul> </li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>STRUCTURE AND PROPERTIES OF MATTER</b> Measurements of a variety of properties can be used to identify materials. (UE.PS1A.c)</p>	<p><b>SCALE, PROPORTION, AND QUANTITY</b> Standard units are used to measure and describe physical quantities such as mass, time, temperature, and volume.</p>

## MATTER AND ITS INTERACTIONS

<b>Performance Expectation</b>	Conduct an investigation to determine whether the mixing of two or more substances results in new substances.
<b>Clarification Statement</b>	Examples of interactions forming new substances can include mixing baking soda and vinegar. Examples of interactions not forming new substances can include mixing baking soda and water.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li>Developing and using models</li> <li><b>3. Planning and carrying out Investigations:</b> Planning and carrying out investigations to answer questions or test solutions to problems in 3-5 builds on K-2 experiences and progresses to include investigations that control variables and provide evidence to support explanations or design solutions. <ul style="list-style-type: none"> <li>Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered.</li> </ul> </li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>CHEMICAL REACTIONS</b></p> <p>When two or more different substances are mixed, a new substance with different properties may be formed. (UE.PS1B.a)</p>	<p><b>CAUSE AND EFFECT</b></p> <p>Cause and effect relationships are routinely identified, tested, and used to explain change.</p>

## MOTION AND STABILITY: FORCES AND INTERACTIONS

<b>Performance Expectation</b>	Support an argument that the gravitational force exerted by the Earth is directed down.
<b>Clarification Statement</b>	“Down” is a local description of the direction that points toward the center of the spherical Earth. Earth’s mass causes objects to have a force on them that points toward the center of the Earth, “down”. Support for arguments can be drawn from diagrams, evidence, and data that are provided. This does not include mathematical representation of gravitational force.

<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li>Developing and using models</li> <li>Planning and carrying out Investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li><b>Engaging in argument from evidence:</b> Engaging in argument from evidence in 3–5 builds on K–2 experiences and progresses to critiquing the scientific explanations or solutions proposed by peers by citing relevant evidence about the natural and designed world(s) <ul style="list-style-type: none"> <li>Construct and/or support an argument with evidence, data, and/or a model.</li> </ul> </li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>TYPES OF INTERACTIONS</b></p> <p>The gravitational force of Earth acting on an object near Earth’s surface pulls that object toward the planet’s center. (UE.PS2B.c)</p>	<p><b>CAUSE AND EFFECT</b></p> <p>Cause and effect relationships are routinely identified, tested, and used to explain change.</p>

## MATTER AND ENERGY IN ORGANISMS AND ECOSYSTEMS

<b>Performance Expectation</b>	Use models to describe that energy in animals' food (used for body repair, growth, motion, and to maintain body warmth) was once energy from the sun.
<b>Clarification Statement</b>	Examples of models could include diagrams or flowcharts.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li><b>Developing and using models:</b> Modeling in 3–5 builds on K–2 experiences and progresses to building and revising simple models and using models to represent events and design solutions. <ul style="list-style-type: none"> <li>Develop and/or use models to describe and/or predict phenomena.</li> </ul> </li> <li>Planning and carrying out Investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>ENERGY IN CHEMICAL PROCESSES AND EVERYDAY LIFE</b> The energy released from food was once energy from the sun that was captured by plants in the chemical process that forms plant matter (from air and water). (UE.PS3D.b)</p> <p><b>ORGANIZATION FOR MATTER AND ENERGY FLOW IN ORGANISMS</b> Food provides animals with the materials they need for body repair and growth and energy they need to maintain body warmth and for motion. (UE.LS1C.a)</p>	<p><b>ENERGY AND MATTER</b> Energy can be transferred in various ways and between objects.</p>

## FROM MOLECULES TO ORGANISMS: STRUCTURES AND PROCESSES

<b>Performance Expectation</b>	Ask questions about how air and water affect the growth of plants.
<b>Clarification Statement</b>	Emphasis is on the idea that plant matter comes mostly from air and water, not from the soil. The chemical processes of photosynthesis and cellular respiration are not addressed at this grade level.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>1. Asking questions and defining problems:</b> Asking questions (science) and defining problems (engineering) in 3-5 builds on K-2 experiences and progresses to specifying qualitative relationships.</p> <ul style="list-style-type: none"> <li>Ask questions that can be investigated and predict reasonable outcomes based on patterns such as cause and effect relationships.</li> </ul> <p>2. Developing and using models</p> <p>3. Planning and carrying out Investigations</p> <p>4. Analyzing and interpreting data</p> <p>5. Using mathematics and computational thinking</p> <p>6. Constructing explanations and designing solutions</p> <p>7. Engaging in argument from evidence</p> <p>8. Obtaining, evaluating, and communicating information</p>	<p><b>ORGANIZATION FOR MATTER AND ENERGY FLOW IN ORGANISMS</b></p> <p>Plants acquire their material for growth chiefly from air and water. (UE.LS1C.b)</p>	<p><b>ENERGY AND MATTER</b></p> <p>Matter is transported into, out of, and within systems.</p>

## ECOSYSTEMS

<b>Performance Expectation</b>	Develop a model to describe the movement of matter among plants, animals, decomposers, and the environment.
<b>Clarification Statement</b>	Emphasis is on the idea that matter that is not food (air, water, decomposed materials in soil) is changed by plants into matter that is food. Examples of systems could include organisms, ecosystems of the Earth not including molecular explanations.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li><b>Developing and using models:</b> Modeling in 3–5 builds on K–2 experiences and progresses to building and revising simple models and using models to represent events and design solutions. <ul style="list-style-type: none"> <li>Develop and/or use models to describe and/or predict phenomena.</li> </ul> </li> <li>Planning and carrying out investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>INTERDEPENDENT RELATIONSHIPS IN ECOSYSTEMS</b></p> <p>The food of almost any kind of animal can be traced back to plants. Organisms are related in food webs in which some animals eat plants for food and other animals eat the animals that eat plants. (UE.LS2A.a)</p> <p>Some organisms, such as fungi and bacteria, break down dead organisms and therefore operate as “decomposers.” Decomposition eventually restores (recycles) some materials back to the soil. (UE.LS2A.b)</p> <p>Organisms can survive only in environments in which their particular needs are met. A healthy ecosystem is one in which multiple species of different types are each able to meet their needs in a relatively stable web of life. (UE.LS2A.c)</p> <p>Newly introduced species can damage the balance of an ecosystem. (UE.LS2A.d)</p> <p><b>CYCLES OF MATTER AND ENERGY TRANSFER IN ECOSYSTEMS</b></p> <p>Matter cycles between the air and soil and among plants, animals, decomposers, and microbes as these organisms live and die. Organisms obtain gases, and water, from the environment, and release waste matter (gas, liquid, or solid) back into the environment. (UE.LS2B.a)</p>	<p><b>SYSTEMS AND SYSTEM MODELS</b></p> <p>A system can be described in terms of its components and their interactions.</p>

## EARTH'S PLACE IN THE UNIVERSE

<b>Performance Expectation</b>	Support an argument that differences in the apparent brightness of the sun compared to other stars is due to their relative distances from the Earth.
<b>Clarification Statement</b>	Examples include the relative distances of the stars, but not the sizes. It does not include other factors that affect apparent brightness (such as stellar masses, age, stage).

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li>Developing and using models</li> <li>Planning and carrying out investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li><b>Engaging in argument from evidence:</b> Engaging in argument from evidence in 3-5 builds on K-2 experiences and progresses to critiquing the scientific explanations or solutions proposed by peers by citing relevant evidence about the natural and designed world(s). <ul style="list-style-type: none"> <li>Construct and/or support an argument with evidence, data, and/or a model.</li> </ul> </li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>THE UNIVERSE AND ITS STARS</b></p> <p>The sun is a star that appears larger and brighter than other stars because it is closer. Stars range greatly in their distance from Earth. (UE.ESS1A.a)</p>	<p><b>SCALE, PROPORTION, AND QUANTITY</b></p> <p>Natural objects and/or observable phenomena exist from the very small to the immensely large or from very short to very long time periods.</p>

## EARTH'S PLACE IN THE UNIVERSE

<b>Performance Expectation</b>	Represent data in graphical displays to reveal patterns of daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.
<b>Clarification Statement</b>	Patterns could include the position and motion of Earth with respect to the sun and selected stars that are visible only in particular months; not including the causes of the seasons.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li>Developing and using models</li> <li>Planning and carrying out investigations</li> <li><b>Analyzing and interpreting data:</b> Analyzing data in 3-5 builds on K-2 experiences and progresses to introducing quantitative approaches to collecting data and conducting multiple trials of qualitative observations. When possible and feasible, digital tools should be used. <ul style="list-style-type: none"> <li>Represent data in tables and/or various graphical displays (bar graphs, pictographs and/or pie charts) to reveal patterns that indicate relationships.</li> </ul> </li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>HISTORY OF PLANET EARTH</b></p> <p>The orbits of Earth around the sun and of the moon around Earth, together with the rotation of Earth about an axis between its North and South poles, cause observable patterns. These include: day and night, daily changes in the length and direction of shadows, and different positions of the sun, moon, and stars at different times of the day, month, and year. (UE.ESS1B.a)</p>	<p><b>PATTERNS</b></p> <p>Similarities and differences in patterns can be used to sort, classify, communicate and analyze simple rates of change for natural phenomena and designed products.</p>

## EARTH'S SYSTEMS

<b>Performance Expectation</b>	Develop a model using an example to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact.
<b>Clarification Statement</b>	Examples could include the influence of the ocean on ecosystems, landform shape, and climate; the influence of the atmosphere on landforms and ecosystems through weather and climate; and the influence of mountain ranges on winds and clouds in the atmosphere. The geosphere, hydrosphere, atmosphere, and biosphere are each a system.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li><b>Developing and using models:</b> Modeling in 3–5 builds on K–2 experiences and progresses to building and revising simple models and using models to represent events and design solutions. <ul style="list-style-type: none"> <li>Develop and/or use models to describe and/or predict phenomena.</li> </ul> </li> <li>Planning and carrying out investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>EARTH MATERIALS AND SYSTEMS</b></p> <p>Earth's major systems are the geosphere (solid and molten rock, soil, and sediments), the hydrosphere (water and ice), the atmosphere (air), and the biosphere (living things, including humans). These systems interact in multiple ways to affect Earth's surface materials and processes. The ocean supports a variety of ecosystems and organisms, shapes landforms, and influences climate. Winds and clouds in the atmosphere interact with the landforms to determine patterns of weather. (UE.ESS2A.b)</p>	<p><b>SYSTEMS AND SYSTEM MODELS</b></p> <p>A system can be described in terms of its components and their interactions.</p>

## EARTH'S SYSTEMS

### Performance Expectation

Describe and graph the amounts and percentages of water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.

### Clarification Statement

Examples include oceans, lakes, rivers, glaciers, ground water, and polar ice caps.

### Science & Engineering Practices

1. Asking questions and defining problems
2. Developing and using models
3. Planning and carrying out investigations
4. Analyzing and interpreting data
5. **Using mathematics and computational thinking:**  
Mathematical and computational thinking in 3–5 builds on K–2 experiences and progresses to extending quantitative measurements to a variety of physical properties and using computation and mathematics to analyze data and compare alternative design solutions.
  - Describe, measure, estimate, and/or graph quantities (e.g., area, volume, time) to address scientific and engineering questions and problems.
6. Constructing explanations and designing solutions
7. Engaging in argument from evidence
8. Obtaining, evaluating, and communicating information

### Disciplinary Core Ideas

#### THE ROLES OF WATER IN EARTH'S SURFACE PROCESSES

Nearly all of Earth's available water is in the ocean. Most fresh water is in glaciers or underground; only a tiny fraction is in streams, lakes, wetlands, and the atmosphere. (UE.ESS2C.a)

Liquid water can become the gas form of water (water vapor) and liquid water can become a solid as ice. (UE.ESS2C.b)

### Crosscutting Concepts

#### SCALE, PROPORTION, AND QUANTITY

Standard units are used to measure and describe physical quantities such as mass, time, temperature, and volume.

## EARTH AND HUMAN ACTIVITY

<b>Performance Expectation</b>	Generate and compare multiple solutions about ways individual communities can use science to protect the Earth's resources and environment.
<b>Clarification Statement</b>	Examples of solutions can include cleanup of oil spills, protecting against coastal erosion, or prevention of polluted runoff into waterways.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li>Developing and using models</li> <li>Planning and carrying out investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations (science) and designing solutions (engineering) in 3–5 builds on K–2 experiences and progresses to the use of evidence in constructing explanations that specify variables that describe and predict phenomena and in designing multiple solutions to design problems. <ul style="list-style-type: none"> <li>Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design solution.</li> </ul> </li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>HUMAN IMPACTS ON EARTH SYSTEMS</b> Human activities in agriculture, industry, and everyday life have had major effects on the land, vegetation, streams, ocean and the atmosphere. But individuals and communities are doing things to help protect Earth's resources and environments. (UE.ESS3C.a)</p> <p><b>DEVELOPING POSSIBLE SOLUTIONS</b> Tests are often designed to identify failure points or difficulties, which suggest the elements of the design that need to be improved. (ETS.UE.1B.c)</p>	<p><b>SYSTEMS AND SYSTEM MODELS</b> A system can be described in terms of its components and their interactions.</p>
