

## ENERGY

<b>Performance Expectation</b>	Use evidence to construct an explanation relating the speed of an object to the energy of that object.
<b>Clarification Statement</b>	Relating the speed of an object to the energy of the object does not require calculation of the object's speed.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>1. Asking questions and defining problems</li> <li>2. Developing and using models</li> <li>3. Planning and carrying out Investigations</li> <li>4. (UE.PS3A.b)</p> <p><b>CONSERVATION OF ENERGY AND ENERGY TRANSFER</b> Energy is present whenever there are moving objects, sound, light, or heat. When objects collide, energy can be transferred from one object to another, thereby changing their motion. In such collisions, some energy is typically also transferred to the surrounding air; as a result, the air gets heated and sound is produced. (UE.PS3B.a)</p> <p>Light also transfers energy from place to place. (UE.PS3B.b)</p> <p>Energy can also be transferred from place to place by electric currents, which can then be used locally to produce motion, sound, heat, or light. The currents may have been produced to begin with by transforming the energy of motion into electrical energy. (UE.PS3B.c)</p>	<p><b>ENERGY AND MATTER</b> Energy can be transferred in various ways and between objects.</p>

## ENERGY

<b>Performance Expectation</b>	Ask questions and predict outcomes about the changes in energy that occur when objects collide.
<b>Clarification Statement</b>	Emphasis is on the change in the energy due to the change in speed, not on the forces, as objects interact. Quantitative measurements of energy are not included.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li><b>Asking questions and defining problems:</b> Asking questions (science) and defining problems (engineering) in 3–5 builds on K–2 experiences and progresses to specifying qualitative relationships. <ul style="list-style-type: none"> <li>Ask questions that can be investigated and predict reasonable outcomes based on patterns such as cause and effect relationships.</li> </ul> </li> <li>Developing and using models</li> <li>Planning and carrying out investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>DEFINITIONS OF ENERGY</b> Energy can be moved from place to place by moving objects or through sound, light, or electric currents. (UE.PS3B.a)</p> <p><b>RELATIONSHIP BETWEEN ENERGY AND FORCES</b> When objects collide, the contact forces transfer energy so as to change the objects' motions. (UE.PS3C.a)</p>	<p><b>ENERGY AND MATTER</b> Energy can be transferred in various ways and between objects.</p>

## ENERGY

<b>Performance Expectation</b>	Apply scientific ideas to design, test, and refine a device that converts energy from one form to another.
<b>Clarification Statement</b>	Examples of devices could include electric circuits that convert electrical energy into motion energy of a vehicle, light, or sound and a passive solar heater that converts light into heat. Example of constraints could include the materials, cost, or time to design the device.

<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li>Developing and using models</li> <li>Planning and carrying out Investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li><b>Constructing explanations and designing solutions:</b> Constructing explanations (science) and designing solutions (engineering) in 3–5 builds on K–2 experiences and progresses to the use of evidence in constructing explanations that specify variables that describe and predict phenomena and in designing multiple solutions to design problems. <ul style="list-style-type: none"> <li>Apply scientific ideas to solve design problems.</li> </ul> </li> <li>Engaging in argument from evidence</li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>CONSERVATION OF ENERGY AND ENERGY TRANSFER</b> Energy can also be transferred from place to place by electric currents, which can then be used locally to produce motion, sound, heat, or light. The currents may have been produced to begin with by transforming the energy of motion into electrical energy. (UE.PS3B.c)</p> <p><b>ENERGY IN CHEMICAL PROCESSES AND EVERYDAY LIFE</b> The expression “produce energy” typically refers to the conversion of stored energy into a desired form for practical use. (UE.PS3D.a)</p> <p><b>OPTIMIZING THE DESIGN SOLUTION</b> Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints. (UE.ETS1C.a)</p>	<p><b>ENERGY AND MATTER</b> Energy can be transferred in various ways and between objects.</p>

## WAVES AND THEIR APPLICATIONS IN TECHNOLOGIES FOR INFORMATION TRANSFER

<b>Performance Expectation</b>	Develop a model of waves to describe patterns in terms of amplitude and wavelength and to show that waves can cause objects to move.
<b>Clarification Statement</b>	Examples of models could include diagrams, analogies, or physical models using wire to illustrate wavelength and amplitude of waves. Examples of wave patterns could include the vibrating patterns associated with sound or the vibrating patterns of seismic waves produced by earthquakes. Does not include interference effects, electromagnetic waves, non-periodic waves, or quantitative models of amplitude and wavelength.

<b>Science &amp; Engineering Practices</b>	<b>Disciplinary Core Ideas</b>	<b>Crosscutting Concepts</b>
<ol style="list-style-type: none"> <li>1. Obtaining, evaluating, and communicating information</li> </ol>	<p><b>WAVE PROPERTIES</b></p> <p>Waves, which are regular patterns of motion, can be made in water by disturbing the surface. When waves move across the surface of deep water, the water goes up and down in place; it does not move in the direction of the wave except when the water meets the beach. (UE.PS4A.a)</p> <p>Waves of the same type can differ in amplitude (height of the wave) and wavelength (spacing between wave peaks). (UE.PS4A.b)</p>	<p><b>PATTERNS</b></p> <p>Similarities and differences in patterns can be used to sort, classify, communicate and analyze simple rates of change for natural phenomena and designed products.</p>

## WAVES AND THEIR APPLICATIONS IN TECHNOLOGIES FOR INFORMATION TRANSFER

<b>Performance Expectation</b>	Develop a model to describe that light reflecting from objects and entering the eye allows objects to be seen.
<b>Clarification Statement</b>	Develop a model to make sense of a phenomenon involving the relationship between light reflection and visibility of objects. In the model, identify the relevant components including light and its source, objects, the path that light follows, and the eye.

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts

(UE.PS4B.a)</p>	<p><b>CAUSE AND EFFECT</b> Cause and effect relationships are routinely identified, tested, and used to explain change.</p>

## FROM MOLECULES TO ORGANISMS: STRUCTURE AND PROCESSES

<b>Performance Expectation</b>	Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction.
<b>Clarification Statement</b>	Examples of structures could include thorns, stems, roots, colored petals, heart, stomach, lung, brain, shells, fur or skin.

<b>Science &amp; Engineering Practices</b>	<b>Disciplinary Core Ideas</b>	<b>Crosscutting Concepts</b>
<ol style="list-style-type: none"> <li>Asking questions and defining problems</li> <li>Developing and using models</li> <li>Planning and carrying out investigations</li> <li>Analyzing and interpreting data</li> <li>Using mathematics and computational thinking</li> <li>Constructing explanations and designing solutions</li> <li><b>Engaging in argument from evidence:</b> Engaging in argument from evidence in 3–5 builds on K–2 experiences and progresses to critiquing the scientific explanations or solutions proposed by peers by citing relevant evidence about the natural and designed world(s). <ul style="list-style-type: none"> <li>Construct and/or support an argument with evidence, data, and/or a model.</li> </ul> </li> <li>Obtaining, evaluating, and communicating information</li> </ol>	<p><b>STRUCTURE AND FUNCTION</b> Plants and animals have both internal and external structures that serve various functions in growth, survival, behavior, and reproduction. (UE.LS1A.a)</p>	<p><b>SYSTEMS AND SYSTEM MODELS</b> A system can be described in terms of its components and their interactions.</p>

## FROM MOLECULES TO ORGANISMS: STRUCTURE AND PROCESSES

<p><b>Performance Expectation</b></p>	<p>Construct an explanation to describe how animals receive different types of information through their senses, process the information in their brains, and respond to the information in different ways.</p>
<p><b>Clarification Statement</b></p>	<p>Emphasis is on systems of information transfer. Responses could include animals running from predators, animals returning to breeding grounds, animals scavenging for food, or humans responding to stimuli.</p>

Science & Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<ol style="list-style-type: none"> <li>1. Asking questions and defining problems</li> <li>2. Developing and using models</li> <li>3. Planning and carrying out Investigations</li> <li>4. Constructing explanations and designing solutions:</b> Constructing explanations (science) and designing solutions (engineering) in 3–5 builds on K–2 experiences and progresses to the use of evidence in constructing explanations that specify variables that describe and predict phenomena and in designing multiple solutions to design problems. <ul style="list-style-type: none"> <li>• Construct an explanation of observed relationships (e.g., the distribution of plants in the back yard).</li> </ul> </li> <li>7. Engaging in argument from evidence</li> <li>8. Obtaining, evaluating, and communicating information</li> </ol>	<p><b>STRUCTURE AND FUNCTION</b> Different sense receptors are specialized for particular kinds of information, which then may be processed by the animal’s brain. Animals are able to use their perceptions and memories to guide their actions. (UE.LS1D.a)</p>	<p><b>CAUSE AND EFFECT</b> Events that occur together with regularity might or might not be a cause and effect relationship.</p>

## EARTH'S PLACE IN THE UNIVERSE

<p><b>Performance Expectation</b></p>	<p>Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in landforms over time.</p>
<p><b>Clarification Statement</b></p>	<p>Examples of evidence from patterns could include rock layers with marine shell fossils above rock layers with plant fossils and no shells, indicating a change from land to water over time, and a canyon with different rock layers in the walls and a river in the bottom, indicating that over time a river cut through the rock. Does not include specific knowledge of the mechanism of rock formation or memorization of specific rock formation and layers.</p>

<p><b>Science &amp; Engineering Practices</b></p>	<p><b>Disciplinary Core Ideas</b></p>	<p><b>Crosscutting Concepts</b></p>
<ol style="list-style-type: none"> <li>1. Asking questions and defining problems</li> <li>2. Developing and using models</li> <li>3. Planning and carrying out investigations</li> <li>4.
