

Permeable Pavers

IN-THE GROUND >>>

Paver Driveways

A homeowner near the Lakefront, installed an open-design permeable paver driveway which helps reduce run-off and lets the soil absorb the water naturally. The paver is resting on top of bed of sand and gravel that soaks up the water in between each stone.

Pervious Paver Driveway

DURING

Flood Water Storage Improvements:

- Pervious Pavers
- Underground perforated PVC pipe
- Rain water tanks

Total capacity of water storage = 1,444 gallons

BEFORE

AFTER

Above: Progression photos of Home #1; the original walkway to the house was torn up to install a pervious paver driveway, which lays on a bed of crushed limestone.
